l	CLAIMS
2	I claim:
3	1. A single wheel radial flow gas turbine comprising:
4	a rotatable wheel having an interior side;
5	a radial flow centrifugal compressor section disposed on said interior side of said
6	wheel;
7	a radial outward flow turbine section disposed on said interior side of said wheel, said
8	turbine section being located radially outward from said compressor section; and
9	a stationary shroud having a combustor section and a nozzle section disposed radially
10	between said compressor section and said turbine section;
11	said combustor section having at least one fuel injector;
12	wherein air flows generally radially through said compressor section, said combustor
13	section, said nozzle section, and said turbine section.
14	2. The gas turbine of claim 1 further comprising a generator/starter coupled to
15	said wheel for starting said gas turbine and absorbing energy from said wheel.
16	3. The gas turbine of claim 1 wherein said combustor section comprises at least
17	one water injector radially downstream from said at least one fuel injector.
18	

1	4. A single wheel radial flow gas turbine consisting essentially of:
2	a single, rotatable wheel having an interior side;
3	a radial flow centrifugal compressor section disposed on said interior side of said
4	wheel;
5	a radial outward flow turbine section disposed on said interior side of said wheel, said
6	turbine section being located radially outward from said compressor section; and
7	a stationary shroud having a radial flow combustor section and a nozzle section
8	disposed radially between said compressor section and said turbine section;
9	wherein air flows generally radially through said compressor section, said combustor
10	section, said nozzle section, and said turbine section.
